Label elements

![Signal word: Danger]

Hazard Statements
Extremely flammable gas
Contains gas under pressure; may explode if heated
Fatal if inhaled
Suspected of causing cancer
May cause liver damage through prolonged or repeated exposure
Very toxic to aquatic life with long lasting effects
May form explosive mixtures with air
Symptoms may be delayed

Precautionary Statements - Prevention
Obtain special instructions before use
Do not handle until all safety precautions have been read and understood
Keep away from heat, sparks, open flames, hot surfaces.— No smoking
Do not breathe gas.
Use and store only outdoors or in a well ventilated place
Avoid release to the environment
Wear protective gloves, protective clothing, eye protection, respiratory protection, and/ or face protection
Use a backflow preventive device in piping
Use only with equipment of compatible materials of construction and rated for cylinder pressure
Do not open valve until connected to equipment prepared for use
Close valve after each use and when empty
When returning cylinder, install leak tight valve outlet cap or plug

Precautionary Statements - Response
IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. Immediately call a POISON CENTER or doctor/ physician. IF EXPOSED OR CONCERNED: Get medical advice/ attention.
Leaking gas fire: do not extinguish, unless leak can be stopped safely
Eliminate all ignition sources if safe to do so

Precautionary Statements - Storage
Store locked up
Protect from sunlight when ambient temperature exceeds 52°C/125°F

Precautionary Statements - Disposal
Dispose of contents/containers in accordance with container supplier/owner instructions

Hazards not otherwise classified (HNOC)
Not applicable

3. COMPOSITION/INFORMATION ON INGREDIENTS

4. FIRST AID MEASURES

Description of first aid measures

General advice
Immediate medical attention is required. Show this safety data sheet to the doctor in attendance.

Inhalation
Remove to fresh air and keep comfortable for breathing. If breathing is difficult, give oxygen. If breathing is irregular or stopped, administer artificial respiration.

Skin contact
Immediately flush skin with plenty of water for at least 30 minutes. Immediate medical attention is required.

Eye contact
Immediately flush eyes with running water for at least 30 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Keep eye wide open while rinsing. Immediate medical attention is required.

Ingestion
Not an expected route of exposure.

Self-protection of the first aider
Remove all sources of ignition. RESCUE PERSONNEL SHOULD BE EQUIPPED WITH SELF-CONTAINED BREATHING APPARATUS. Use personal protective equipment. Avoid contact with skin, eyes or clothing. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Most important symptoms and effects, both acute and delayed

Symptoms
Fatal if inhaled. Arsine is an extremely toxic gas that destroys red blood cells and can cause widespread organ injury. Inhalation of 250 ppm for 30 minutes is fatal and 3-10 ppm can cause poisoning symptoms in a few hours. Early effects are commonly characterized by drowsiness, giddiness, headache, thirst and abdominal pain with vomiting. Arsine may discolor urine to red or a darkened color, and the skin to a bronze or jaundiced color. Symptoms may be delayed.

Indication of any immediate medical attention and special treatment needed

Note to physicians
Arsine is a powerful hemolytic agent. The principle clinical manifestation of arsenic toxicity is acute intravascular hemolysis and consequent renal failure. Bronze skin pigmentation may be confused with jaundice. In all cases of exposure, T-wave elevation of serial EKGs has been found. Survivors followed for as long as 18 months showed evidence that arsenic was the causal agent of myocardial degeneration and cardiac failure. Management of intoxication is dependent on treatment of the hemolytic episode and its consequences. Dimercaptol does not appear to alter the course of hemolysis, however, it may be useful in the treatment of arsenic neuropathy that appears to follow some cases of arsenic poisoning. Severe hemolytic anemia may require transfusion of red cells. Alkalization of the urine with small doses of oral sodium bicarbonate has been recommended by
some clinicians in the management of hemoglobinurea. The advice of a nephrologist should be sought quickly.

5. FIRE-FIGHTING MEASURES

Suitable extinguishing media
Dry chemical or CO₂. Water spray (fog). DO NOT EXTINGUISH A LEAKING GAS FIRE UNLESS LEAK CAN BE STOPPED.

Unsuitable extinguishing media
Do not use halogenated extinguishing agents or foam.

Specific extinguishing methods
If possible, stop the flow of gas. Do not extinguish the fire until supply is shut off as otherwise an explosive-ignition may occur. If the fire is extinguished and the flow of gas continues, use increased ventilation to prevent build-up of explosive atmosphere. Ventilation fans must be explosion proof. Use non-sparking tools to close container valves.

Use water spray to cool surrounding containers. Be cautious of a Boiling Liquid Evaporating Vapor Explosion, BLEVE, if flame is impinging on surrounding containers. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible withdraw from area and let fire burn. Damaged cylinders should be handled only by specialists.

Specific hazards arising from the chemical
Extremely flammable gas. May form explosive mixtures with air. Will be easily ignited by heat, sparks or flames. Low ignition energy. Vapors may travel to source of ignition and flash back. Vapors from liquefied gas are initially heavier than air and spread along ground. Vapors may accumulate in confined areas (basement, tanks, hopper/ tank cars, etc.). Cylinders may rupture under extreme heat.

Hazardous combustion products
Arsenic compounds including arsenic trioxide.

Protective equipment and precautions for firefighters
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/ NIOSH (approved or equivalent) and full protective gear. Additional chemical protective clothing may be required to protect from toxic decomposition products.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures

Personal precautions
ELIMINATE all ignition sources (no smoking, flares, sparks or flames in immediate area). Evacuate personnel to safe areas. Keep people away from and upwind of spill/ leak. Ensure adequate ventilation, especially in confined areas. Consider the risk of potentially explosive atmospheres. Monitor concentration of released product. All equipment used when handling the product must be grounded. Use non-sparking tools and equipment. Wear self-contained breathing apparatus when entering area unless atmosphere is proved to be safe. Use personal protection recommended in Section 8.

Other Information
Gas/ vapor is heavier than air. Prevent from entering sewers, basements and workpits, or any place where accumulation may be dangerous.

Environmental precautions
Prevent spreading of vapors through sewers, ventilation systems and confined areas. See Section 12 for additional ecological information.

Methods and material for containment and cleaning up

Methods for containment
Stop the flow of gas or remove cylinder to outdoor location if this can be done without risk. If leak is in container or container valve, contact the appropriate emergency telephone number in Section 1 or call your closest Linde location.

Methods for cleaning up
Return cylinder to Linde or an authorized distributor. Do not direct water at spill or source of leak.
7. HANDLING AND STORAGE

Precautions for safe handling

Advice on safe handling

Aluminum, carbon steel, stainless steel, Monel®, and Hastelloy C® are preferred materials for handling arsine. Brass should be avoided. Kel-F® and Teflon® are preferred gasket materials; Viton® and Nylon® are acceptable. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Ground and bond all lines and equipment associated with product system. All equipment should be non-sparking and explosion proof. Separate flammable gas cylinders from oxygen and other oxidizers by a minimum distance of 20 ft. or by a 5 ft. high barrier with a minimum fire resistance rating of a half an hour. "NO SMOKING" signs should be posted in storage and use areas.

Protect cylinders from physical damage; do not drag, roll, slide or drop. When moving cylinders, even for short distance, use a cart designed to transport cylinders. Never attempt to lift a cylinder by its valve protection cap. Never insert an object (e.g. wrench, screwdriver, pry bar, etc.) into valve cap openings. Doing so may damage valve, causing leak to occur. Use an adjustable strap wrench to remove over-tight or rusted caps. Use only with adequate ventilation. Use a backflow preventive device in piping. Use only with equipment rated for cylinder pressure. Close valve after each use and when empty. If user experiences any difficulty operating cylinder valve discontinue use and contact supplier. Ensure the complete gas system has been checked for leaks before use.

Never put cylinders into trunks of cars or unventilated areas of passenger vehicles. Never attempt to refill a compressed gas cylinder without the owner's written consent. Never strike an arc on a compressed gas cylinder or make a cylinder a part of an electrical circuit.

Only experienced and properly instructed persons should handle gases under pressure. Always store and handle compressed gas cylinders in accordance with Compressed Gas Association, pamphlet CGA-P1, Safe Handling of Compressed Gases in Containers.

Conditions for safe storage, including any incompatibilities

Storage Conditions

Store in cool, dry, well-ventilated area of non-combustible construction away from heavily trafficked areas and emergency exits. Keep at temperatures below 52°C / 125°F. Cylinders should be stored upright with valve protection cap in place and firmly secured to prevent falling. Full and empty cylinders should be segregated. Use a "first in-first out" inventory system to prevent full cylinders from being stored for excessive periods of time. Stored containers should be periodically checked for general condition and leakage. Outside or detached storage is preferred.

Incompatible materials

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Control parameters

Exposure Guidelines

<td>TWA: 0.005 ppm TWA: 0.01 mg/ m³ As</td>
<td>TWA: 0.2 mg/ m³</td>
<td>IDLH: 3 ppm IDLH: 5 mg/ m³ As Ceiling: 0.002 mg/ m³ 15 min Ceiling: 0.002 mg/ m³ As 15 min</td>
</tr>
</tbody>
</table>

ACGIH TLV: American Conference of Governmental Industrial Hygienists - Threshold Limit Value. OSHA PEL: Occupational Safety and Health Administration - Permissible Exposure Limits. NIOSH IDLH: Immediately Dangerous to Life or Health

Vacated limits revoked by the Court of Appeals decision in AFL-CIO v. OSHA, 965 F.2d 962 (11th Cir., 1992).

Appropriate engineering controls

Showers. Eyewash stations. Explosion proof ventilation systems. Exhaust gas should be vented to a gas treatment system. Consider installation of leak detection systems in areas of use and storage.
Systems under pressure should be regularly checked for leakages.

**Individual protection measures, such as personal protective equipment**

**Eye/face protection**
Tightly fitting safety goggles.

**Skin and body protection**
Wear fire/flame resistant/retardant clothing. Take precautionary measures against static discharge. Appropriate protective and chemical resistant gloves, clothing and splash protection, or fully encapsulating vapor protective clothing to prevent exposure. For materials of construction consult protective clothing manufacturer's specifications. Work gloves and safety shoes are recommended when handling cylinders.

**Respiratory protection**
If exposure limits are exceeded or irritation is experienced, NIOSH/MSHA approved respiratory protection should be worn. Positive-pressure supplied air respirators may be required for high airborne contaminant concentrations. Respiratory protection must be provided in accordance with current local regulations.

**General Hygiene Considerations**
Handle in accordance with good industrial hygiene and safety practice. Do not eat, drink or smoke when using this product. Wash hands before breaks and immediately after handling the product. Regular cleaning of equipment, work area and clothing is recommended.

**Chemical Name** | **Molecular weight** | **Boiling point** | **Vapor Pressure** | **Vapor density (air =1)** | **Gas Density kg/m³ @ 20°C** | **Critical Temperature**
---|---|---|---|---|---|---
Arsine | 77.94 | -62.48 °C | 218 PSIA @ 70°F | 2.67 | 3.27 | 99.9 °C

Note: *The odor threshold of arsine is 10-fold greater than the OSHA permissible exposure limit. Odor is not an adequate indicator of arsine’s presence and does not provide reliable warning of hazardous concentrations.*

### 10. STABILITY AND REACTIVITY

**Reactivity**
Normally stable, but can become unstable at elevated temperature and pressure

**Chemical stability**
Stable under recommended storage and handling conditions (see Section 7).

**Explosion data**

| Sensitivity to Mechanical Impact | None. |
Sensitivity to Static Discharge  Yes.

Possibility of Hazardous Reactions
May form explosive mixtures with air.

Conditions to avoid
Heat, flames and sparks. Extremes of temperature and direct sunlight.

Incompatible materials

Hazardous Decomposition Products
Hydrogen gas. May decompose to arsenic and arsenic trioxide above 232 °C (450 °F).

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure

Inhalation
Arsine is a powerful reducing agent and has a strong affinity for the hemoglobin in the blood. The hemolysis of the red blood cells causes renal failure. The destruction of red blood cells causes the primary manifestation of hemolysis. Renal function impairment and possible complete shutdown is the most serious manifestation of arsine poisoning. Permanent injury, especially to the central nervous system or fatal consequences are also well recognized.

Skin contact
May cause irritation. Contact with liquid may cause cold burns/frostbite.

Eye contact
High concentrations may cause eye damage, however, systemic poisoning will occur first. Contact with liquid may cause cold burns/frostbite.

Ingestion
Not an expected route of exposure.

Information on toxicological effects

Symptoms
Fatal if inhaled. Arsine is a an extremely toxic gas that destroys red blood cells and can cause widespread organ injury. Inhalation of 250 ppm for 30 minutes is fatal and 3-10 ppm can cause poisoning symptoms in a few hours. Early effects are commonly characterized by drowsiness, giddiness, headache, thirst and abdominal pain with vomiting. Arsine may discolor urine to red or a darkened color, and the skin to a bronze or jaundiced color. Symptoms may be delayed.

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Irritation
Not classified.

Sensitization
Not classified.

Germ cell mutagenicity
Not classified.

Carcinogenicity
The table below indicates whether each agency has listed any ingredient as a carcinogen. (For arsenic and inorganic arsenic compounds).

<table>
<thead>

**OSHA** (Occupational Safety and Health Administration of the US Department of Labor)
X - Present

Reproductive toxicity
Not classified.

STOT - single exposure
Not classified.

STOT - repeated exposure

Chronic toxicity
Contains a known or suspected reproductive toxin. May cause adverse liver and kidney effects. May
cause adverse effects on the bone marrow and blood-forming system. Prolonged or repeated exposure increases the risk. Possible risks of irreversible effects.

**Target Organ Effects**

Lungs, Liver, Kidney, Blood, Lymphatic system.

**Aspiration hazard**

Not applicable.

**Numerical measures of toxicity**
